

# BE TRACED

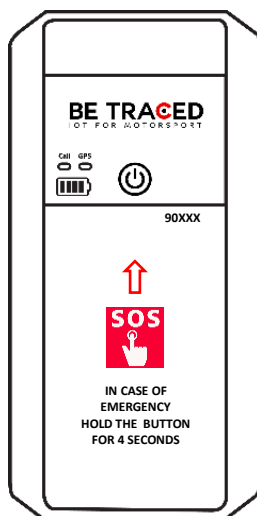

IOT FOR MOTORSPORT

**INSTRUCTIONS FOR USE  
BT-SMART**

---

## BT-Smart instructions for use

**Fig. 1: BT-Smart GPS device**

Be Traced is the exclusive platform for the safety and organization of sportscars events.

Be Traced assists drivers and organizing bodies for efficient performance of the entire race and improves emergency management, providing accuracy, reliability and timeliness.

Each competitor and each operator of the Organization institution are equipped with the **BT-Smart GPS device**, which sends its position, every second, to the **Be Traced Platform** supplied to the Organization.

### Installation

BT-Smart is magnetic and will be applied directly on the car: to a roll-bar or to a metal part that allows a sufficiently secure fastening.

**WARNING:** In order to do so it is necessary to **use ties** and if needed **reinforce the device with duct tape**.

In case of emergency, the device must be reachable by both crew members

## Localization

**BT-Smart** is self-powered and is equipped with an internal battery that allows working for months without being recharged. It has an integrated SIM Card capable of operating in 280 countries around the world and roaming on multiple operators, ensuring the largest possible connectivity.

The device works completely automatically, the pilots are not required to perform any operation to activate it.

## Request for help- Emergencies

If the competitor needs medical or mechanical assistance during the event, he can request it by pressing the single button on the device for 4 seconds. **BT-Smart** will immediately send the rescue request to the **Be Traced Platform** and will be received instantly by the Organization, who will promptly send the technical or medical assistance closest to the competitor's position.

## Regulations

**BT-Smart** holds an identification number that is assigned to the competitor's car, it is absolutely forbidden to tamper with, obscure or exchange the device during the competition. The device is delivered and installed on the competitor's car and from that moment it is in charge of the same and it is therefore his responsibility to return it intact; if the device is not returned, the competitor will be required to reimburse the Organization.
